Yoga Democracy VIP Membership — Developer Handoff & Install Guide

Built in sandbox BLZZ_003 · Prepared for Landon & Jay

July 2026

1. What this is

A two-tier paid VIP membership for the Yoga Democracy B2C storefront (`int_yd_vip` cartridge + Business Manager config), built and tested in sandbox **BLZZ_003**. This guide lets you install the same thing in another sandbox/instance.

Tiers

Tier	Fee	Everyday discount	Welcome offer (first order)	Extras
Silver	$15/mo	30% off	60% off (code WELCOME60)	Free shipping, early access, Rewards
Gold	$30/mo	40% off	80% off (code WELCOME80)	+ a free item every month

VIP and YD Rewards are separate; joining VIP auto-enrolls the member in Rewards.

2. Package contents

- `int_yd_vip.zip` — the custom cartridge (controllers, scripts, ISML, client assets, job step type)
- `yd_vip_metadata.zip` — system-object extensions (Profile + SitePreferences custom attrs), the `VIPBillingLedger` custom object, and the Cybersource service definition

- This guide

3. Install steps

3a. Deploy the cartridge

1. Upload `int_yd_vip` to your active code version via WebDAV (`/on/demandware.servlet/webdav/Sites/Cartridges/<version>/`) or VS Code / `sfcc-ci`. Unzip server-side.
2. Administration → Sites → Manage Sites → Yoga Democracy → Settings → **prepend `int_yd_vip:`** to the cartridge path.
3. Reactivate the code version (activate another version, then reactivate yours) so ISML templates recompile.

3b. Import metadata

Administration → Site Development → **Site Import & Export** → upload `yd_vip_metadata.zip` → Import. Adds to Profile: `vipTier`, `vipStatus`, `vipMemberSince`, `vipCanceledOn`, `vipLastBilledOn`, `vipPaymentInstrumentId`, `rewardsEnrolled`; to SitePreferences: `vipMonthlyPrice(Label)`; plus the `VIPBillingLedger` custom object and `cybersource.rest.vip` service.

3c. Business Manager config (Merchant Tools)

Customer groups (Customers → Customer Groups): `YD-Silver`, `YD-Gold`. *(See §5 for the recommended dynamic-group approach.)*

Promotions (Online Marketing → Promotions), all Product class, 30/40/60/80% off category `root`: - `yd-member-pricing-20` → 30% (Silver everyday) - `yd-gold-pricing-40` → 40% (Gold everyday) - `yd-vip-welcome-60` → 60%, Exclusivity **GLOBAL** - `yd-vip-welcome-80` → 80%, Exclusivity **GLOBAL**

Coupons (Online Marketing → Coupons), single-code, 1 redemption/customer, enabled: `WELCOME60`, `WELCOME80`.

Campaigns (Online Marketing → Campaigns), enabled, continuous: - `yd-members-club` → qualifier customer group YD-Silver → promo yd-member-pricing-20 - `yd-gold-club` → qualifier customer group YD-Gold → promo yd-gold-pricing-40 - `yd-vip-welcome-offers` → coupon WELCOME60 → promo yd-vip-welcome-60 - `yd-vip-welcome-80-offer` → coupon WELCOME80 → promo yd-vip-welcome-80

Content assets (Content → Content Assets), Online=Yes: `vip-join-content` (two-tier plan cards + FAQ), `vip-member-content` (member view), `vip-checkout-content` (optional), `vip-welcome-content` (tier-neutral welcome). Body HTML is in the cartridge templates as fallbacks; copy is editable here with no deploy.

4. Storefront routes

- `VIP-Show` — join page (two plans) or member view
- `VIP-Join?tier=silver|gold` — login-gated confirm step for the chosen tier
- `VIP-Process` — activates membership for the posted tier (mock; no charge)
- `VIP-Confirm?tier=...` — welcome page with the tier's welcome code

Link it from nav/footer via `$url('VIP-Show')$` (sandbox uses a "VIP" nav category with an Alternative URL, plus a footer link).

5. RECOMMENDED FIX — instant member pricing on join

Symptom: after joining, the everyday 30%/40% doesn't apply until the shopper's next login.

Cause: static customer-group membership is resolved at authentication and cached for the session; assigning the group mid-join isn't seen until re-login.

Recommended fix: make `YD-Silver` / `YD-Gold` **dynamic** customer groups instead of static, with rules keyed off the profile attribute the join already sets:

```
Silver group rule:  CurrentCustomer.profile.custom.vipStatus = 'ACTIVE'
                    AND CurrentCustomer.profile.custom.vipTier = 'silver'
Gold group rule:    CurrentCustomer.profile.custom.vipStatus = 'ACTIVE'
                    AND CurrentCustomer.profile.custom.vipTier = 'gold'
```

Dynamic groups are evaluated live per request, so the tier applies immediately after join with no re-login. Then in `membershipService.js` the `setGroup()` assign/unassign calls become unnecessary (membership follows the attribute) — the join just needs to set `vipStatus`/`vipTier` (it already does). Re-point the two everyday campaigns at the new dynamic groups. Please verify the live-refresh timing in your session setup before removing the static-group logic.

6. Payment (open item — needs Cybersource dev creds)

`scripts/payments/cybersourceRecurring.js` + the `custom.VIPBilling` job step charge a stored Cybersource TMS token monthly. Currently in **mock mode** (`mock-mode-enabled` on service `cybersource.rest.vip`). To go live: set the key id / shared secret on the `cybersource.rest.vip.cred` credential (BM → Administration → Operations → Services), implement HTTP Signature auth in `createRequest`, and capture the card token during join via the existing `int_cybs_sfra` flow, storing it on `profile.custom.vipPaymentInstrumentId`.

7. Other open items

- **Gold monthly free item** — build a scheduled job that grants one free item/month to active Gold members (pairs with the billing job).
- **Account page / SOM** — `enableSOMOrderHistory` was set to No in BLZZ_003 to unblock login; a permanent fix is linking the sandbox to a SOM dev org.
- **Compliance** — ROSCA/click-to-cancel: cancel is one-click by design; add clear recurring-billing disclosure at the payment step before production.
